# The Puppy App

Jeffrey Zhang, Husain Taher, Nicket Patel, Lauren Ward, Anurag Bolneni

GitHub Repo: https://github.com/jczhang88/ThePuppyApp

- <u>Profile:</u> User can edit his/her profile by adding a profile picture, occupation, location, and short biography. The user can also add puppies to his/her profile under this activity, including name, breed, picture, age, and biography.

- <u>Puppy Playdates:</u> User can create his/her events under "Create My Playdate," and view these events under "My Playdates." The main Puppy Playdates functionality allows the user to view playdates posted by other users and RSVP to them by clicking on "Add to Calendar." This will also add the playdate to the user's Google Calendar.

- <u>Bark Board:</u> This functionality is a discussion thread that allows users to post anything dog-related, from requesting for a dog sitter to soliciting suggestions for the best dog clothing.

- <u>Fetch:</u> User can browse random puppies from other users' profiles that pop up on the screen. User can then like and save that puppy for future enjoyment.

- <u>Map:</u> If user has difficulty finding a playdate that he/she RSVP'd to, he/she can look at the map to easily locate the event.
